It is our mission to supply the best quality and most well designed kitchen sinks and accessories. Burns & Ferrall have been manufacturing and supplying stainless steel products to the New Zealand, Australian and Pacific Island markets since 1948. Along with our Commercial Kitchen Division, Kitchenware House, Parts Division and Service Division, the Domestic Stainless Division takes pride in having a great team of people to back up the most innovative, well designed and best quality range of products from around the world.

We are constantly in contact with New Zealand’s best designers, plumbing merchants and crafts people from the joinery industry. In addition we regularly attend trade events both locally and overseas to keep up to date with current trends. This enables us to design and manufacture new products that are current and relevant to todays market.

In addition to our sink products, we can also provide you with stainless steel custom fabricated benches in a variety of styles and finishes. We can also weld any bowl greater than 1.0mm thick together with a bridge starting from a knife edge 3mm.

ELLECI COMPOSITE

The Elleci range of composite sinks are moulded in Italy from 80% granite and 20% resin. This extremely hard material provides a surface that is scratch, stain and heat resistant meaning your sink will remain vibrant indefinitely with proper care. In addition to black and white, the ELGQ105 is available in two Metalitek options that have metal particles added to create a glimmering finish.

The Aquis range of products from Burns & Ferrall are all hand made to the highest standard with all double bowls featuring a 3mm knife edge bridge. The Integrato is designed to disappear into your bench with a range of accessories that sit flush with the bowl. Other accessories such as the colander and drainer basket may be stored in the bowl under the glass cover. While the Integrato is best installed flush with the bench it may also be top or under mounted.

The Aquis Cube has been carefully designed with perfect square vertical corners and a 6mm radius around the bottom. This gives the square look while also allowing the sink to be kept clean, particularly when used in conjunction with a pull out tap. The dimension front to back is 420mm which allows Miele steam oven trays to sit over the bowl. All main bowls are 450mm wide minimum to allow oven trays to sit flat on the bottom of the sink. This design looks particularly stunning with the 3mm knife edge bridge.
The Aquis Cayman features the very current 10mm corner radius. Like the Cube and Stratus, the dimension front to back is 420mm allowing Miele steam oven trays to sit over the bowl. All main bowls are 450mm wide minimum to allow oven trays to sit flat on the bottom of the sink. The stunning knife edge bridge reduces splashing when moving the tap from one bowl to the other while also maximising sink volume in the cabinet space available.

The Burns & Ferrall Designer R25 undermount collection is available in a range of sizes and configurations. These sinks will enhance your kitchen space and integrate with other modern stainless steel appliances. This range is complimented by numerous accessories that are tailored, functional and attractive.
DESIGNER COLLECTION

The Burns & Ferrall Designer R15 collection features deep, tight radius bowls. With our state of the art deep drawing capability we are able to produce sinks bowls with tight geometry normally associated with hand fabricated sinks but the cost advantages of a pressed bowl. For this reason our Designer R15 collection is our most popular range of sinks.

DESIGNER COLLECTION

With an impressive range of different sizes and configurations available there is likely to be a model suitable for any customer. As we are constantly in touch with New Zealand’s best designers and we manufacture to our own specific designs, we are able to bring to market the specifications and the designs our customers require. If we do not have the combination of bowls you require, we can always weld two single bowls together.

Following the Designer R15 design are two models which have a rail system to make top mounting easy. They can also be undermounted and as they have a wide 25mm flange, the sink can be installed allowing the accessories to sit on the bowl. Delta Inserts combine tight 25mm bowl geometry with a multi level drainer pattern to form an attractive modern look. The Delta range offers several large bowl and drainer configurations to fit most cabinet sizes and are also compatible with the Designer R25 range of accessories.

The Burns & Ferrall Designer R10 collection are hand made to the very highest standard. Our specification allows for no more than 1mm tolerance so you can be sure to get a perfect square bowl that your benchtop supplier will be glad to install. As with all bowls being installed undermount, we recommend you advise your benchtop supplier if you intend to use accessories to ensure the bowl is installed to allow them to fit.
Because the Designer R10 collection is made to the very highest standard it is perfect for flush mount, undermount or topmount. Such attention is applied to the finish of this range that any Designer R10 sink will make a stunning addition to any modern kitchen. Like all Designer models, a wide range of accessories are available to compliment your sink and your kitchen. If we do not have the combination of bowls you require, we can always weld two single bowls together.

CLASSIC COLLECTION

The Burns & Ferrall Euronox has been specifically designed by us for the New Zealand market and is by far the best looking insert in its price range. It has a true laser edge that makes wiping into the bowl easy when top mounted and the silky sheen finish that is normally found on European manufactured sink inserts gives the Euronox a high end finish. Its also has 10mm of flat flange that makes undermounting easy if required.

LAUNDRY COLLECTION

As many customers require different options in a laundry bowl, we have provided for all occasions. The Delta DEB120 is perfect in a laundry if your bench is made from laminates. Any wet items can be placed on the drainer to avoid damaging the bench. With an extra large 25mm radius bowl it is also very functional.

Burns & Ferrall provide the widest range of accessories that accompany our range of sinks. In addition, these kitchen accessories may be used to accessorise your kitchen in a very functional way. Our Designer Roller Mats are made from 304 stainless steel and silicone. They are very durable and may be used in the dishwasher. The Eco Bowl is a perfect companion for an extra large bowl as it allows you to only use a small amount of water to wash a few dishes. This allows you to only use the large bowl when required.

**WARRANTY**

**5 YEAR TAP WARRANTY**

- Five (5) year warranty applies to the tap housing starting from date of purchase of the product, two (2) years on the ceramic cartridge from date of purchase of the product. This warranty is non-transferable and applies only to the original purchaser. The guarantee only applies if the mixer is installed with pressure limiting valves.

- Any faults caused by defective production will be replaced free-of-charge during the guarantee period.

- Any such faults will be replaced, at the sole discretion of Burns & Ferrall, either by repairing faulty components or by replacing the whole product with the same or an equivalent model where the balance of the warranty period from the original date of purchase will take effect. The Company is not liable for damage caused by: a) improper or unsuitable use and / or maintenance – b) transport – c) knocks, tampering, incorrect repairs and repairs made by unauthorised technicians – d) normal wear of components (non-valve, membrane, etc.) and / or the use of non-original spare parts – e) non-compliance with the technical instructions – f) freezing and / or impurities in the water pipes.

- The guarantee only applies if a document proving the date of purchase is produced.

- The guarantee does not cover product assembly or disassembly changes, visits and calls of specialised technicians, costs borne by the customer due to the unavailability and / or non-use of the product.

- Any imperfections in the finishes or in the natural materials used should not be considered as faults but a typical characteristic of these crafted products.

- In the case of various accessible visible components and products requiring only minor rectification under guarantee, Burns & Ferrall reserves the right to supply these on a ‘parts only’ bases to the customer. Such articles may include accessories, aerators, hand sprays, hoses, handles, levers, fixings, washers and dress fittings, etc.

**IMPORTANT INFORMATION**

- Flush out pipe work prior to connecting your new mixer.
- All mixers to be installed with isolating stop cocks.
- Tap must be installed with pressure limiting valves.
- Mixer should be installed by a qualified plumber.
- This mixer is designed for domestic use only.
- Failure to comply will void all warranty.

**Taps**

Do I need to install a pressure limiting valve?

In order to comply with the warranty terms and conditions, a pressure limiting valve must be installed if the mains water pressure exceeds 500 kPa.

What is the WELS water scheme?

The WELS water rating label provides water efficiency information for water-using household products. The label carries two important pieces of information to help the consumer to compare products.

The label shows:

a). A one to six star rating for a quick assessment of the model’s water efficiency – the more stars on the label the more water efficient the product.

b). A number showing the water flow per minute (plumbing products) based on laboratory tests. The lower the number the better.

What is a pull-out tap?

A pull-out tap contains an extractable hand-piece that allows you to have greater control over the direction of your water flow.

What is an adjustable spray?

Adjustable sprays are featured on some pull-out taps and are clearly marked. These taps have a button that, when depressed, distributes a gentle flow through the head of the tap, suitable for cleaning vegetables, etc.

**Stainless Steel Sink Care**

Our stainless steel sinks are made from premium quality stainless steel, which is metallurgically incapable of rusting or corroding under normal household conditions.

However, stainless steel can sometimes harbour ferrous (iron-based) particles from the water supply, especially during or immediately after new installations, when pipe work has been disturbed. Filings are deposited on the stainless steel sink surface, where they will cling, and then rust, unless removed. Harsh wash, exposure to chemicals or even periods of non-use can cause spotting or discoloration.

In the event that this occurs, contact our customer service team on 0800 697 465 to receive a complimentary sink care pack. The sink care pack works by removing the protective oxidised layer of the stainless steel and with it hopefully any stains. A new oxidised layer is then formed which protects the stainless steel. If the contaminant has been in contact with the stainless steel for a period of time, pitting of the stainless steel could occur which is not able to be removed.

The ferrous particles may return unless completely removed, so the sink needs to be dried thoroughly after cleaning - and several applications may be necessary before the rust spots are entirely removed.

Strong cleaning to stainless steel is acidic products. For example many cleaning products contain citrus acid and sodium hypochlorite and may discolor if left on stainless steel or even stained beneath. Also, denture cleaning products should be avoided at all times.

**Composite Sink Care**

Composite sinks contain “fired” granite (80%) with acrylic resin for extreme durability. There is no surface coating on the sink – the material, and colour, is consistent throughout the sink. The non-porous surface makes the sink very hygienic. Even coloured liquids such as red wine will not stain.

**Everyday Cleaning**

Wash your sink using warm water, a soft cloth or non-abrasive woven nylon pad, and a non-abrasive liquid cleaner or detergent. This can be done as often as the sink is used.

Rinsing and drying after use is very important to eliminate any film build-up that may develop from硬水 deposits.

**Metallic Abrasions or Heavy Stains**

Wipe the sink using a soft cloth or non-abrasive woven nylon pad and a liquid scouring product. Apply the liquid scouring product sparingly and rub lightly. Repeat as necessary until sink is clean.

**Hard Water, Calcium and Lime Deposits**

Wipe with a non-abrasive woven nylon pad and white vinegar. Rinse after 20 minutes.

**What to Avoid**

- Strong alkalies (ammonia and caustic soda solution) are not recommended.
- Drain unblocking chemicals involving filling the sink with water should not be used.
- Abrasive cleansers, abrasive scrub pads. This will dull and scratch the surface.

**5 YEAR TAP WARRANTY**

<table>
<thead>
<tr>
<th>Key Points</th>
</tr>
</thead>
<tbody>
<tr>
<td>Five (5) year warranty applies to the tap housing starting from date of purchase of the product, two (2) years on the ceramic cartridge from date of purchase of the product. This warranty is non-transferable and applies only to the original purchaser. The guarantee only applies if the mixer is installed with pressure limiting valves.</td>
</tr>
<tr>
<td>Any faults caused by defective production will be replaced free-of-charge during the guarantee period.</td>
</tr>
<tr>
<td>Any such faults will be replaced, at the sole discretion of Burns &amp; Ferrall, either by repairing faulty components or by replacing the whole product with the same or an equivalent model where the balance of the warranty period from the original date of purchase will take effect. The Company is not liable for damage caused by: a) improper or unsuitable use and / or maintenance – b) transport – c) knocks, tampering, incorrect repairs and repairs made by unauthorised technicians – d) normal wear of components (non-valve, membrane, etc.) and / or the use of non-original spare parts – e) non-compliance with the technical instructions – f) freezing and / or impurities in the water pipes.</td>
</tr>
<tr>
<td>The guarantee only applies if a document proving the date of purchase is produced.</td>
</tr>
<tr>
<td>The guarantee does not cover product assembly or disassembly changes, visits and calls of specialised technicians, costs borne by the customer due to the unavailability and / or non-use of the product.</td>
</tr>
<tr>
<td>Any imperfections in the finishes or in the natural materials used should not be considered as faults but a typical characteristic of these crafted products.</td>
</tr>
<tr>
<td>In the case of various accessible visible components and products requiring only minor rectification under guarantee, Burns &amp; Ferrall reserves the right to supply these on a ‘parts only’ bases to the customer. Such articles may include accessories, aerators, hand sprays, hoses, handles, levers, fixings, washers and dress fittings, etc.</td>
</tr>

</table>

**Taps**

Do I need to install a pressure limiting valve?

In order to comply with the warranty terms and conditions, a pressure limiting valve must be installed if the mains water pressure exceeds 500 kPa.

What is the WELS water scheme?

The WELS water rating label provides water efficiency information for water-using household products. The label carries two important pieces of information to help the consumer to compare products.

The label shows:

a). A one to six star rating for a quick assessment of the model’s water efficiency – the more stars on the label the more water efficient the product.

b). A number showing the water flow per minute (plumbing products) based on laboratory tests. The lower the number the better.

What is a pull-out tap?

A pull-out tap contains an extractable hand-piece that allows you to have greater control over the direction of your water flow.

What is an adjustable spray?

Adjustable sprays are featured on some pull-out taps and are clearly marked. These taps have a button that, when depressed, distributes a gentle flow through the head of the tap, suitable for cleaning vegetables, etc.

**Stainless Steel Sink Care**

Our stainless steel sinks are made from premium quality stainless steel, which is metallurgically incapable of rusting or corroding under normal household conditions.

However, stainless steel can sometimes harbour ferrous (iron-based) particles from the water supply, especially during or immediately after new installations, when pipe work has been disturbed. Filings are deposited on the stainless steel sink surface, where they will cling, and then rust, unless removed. Harsh wash, exposure to chemicals or even periods of non-use can cause spotting or discoloration.

In the event that this occurs, contact our customer service team on 0800 697 465 to receive a complimentary sink care pack. The sink care pack works by removing the protective oxidised layer of the stainless steel and with it hopefully any stains. A new oxidised layer is then formed which protects the stainless steel. If the contaminant has been in contact with the stainless steel for a period of time, pitting of the stainless steel could occur which is not able to be removed.

The ferrous particles may return unless completely removed, so the sink needs to be dried thoroughly after cleaning - and several applications may be necessary before the rust spots are entirely removed.

Strong cleaning to stainless steel is acidic products. For example many cleaning products contain citrus acid and sodium hypochlorite and may discolor if left on stainless steel or even stained beneath. Also, denture cleaning products should be avoided at all times.
